EASY-CLEAN EC 60 PAVER CLEANING DEVICE WITH SPRAY PROTECTION

Task:

Pavements and slabs are often unsightly after a short time because the surface becomes polluted and the joints are filled with moss. Up to now, such surfaces are cleaned with standard pressure washers in order to get back the original brightness. However, the high pressure jet of water which cleans the joints and the surface, is polluting at the same time walls and persons. The pressure cleaners offered by the industry including a protection cover mostly don't have a sufficient working width and are complicated in use.

Solution:

Easy-Clean EC 60 is cleaning surfaces and joints at a time, the jet of water is held under a protection cover

A rotation arm with 2 nozzles close to the surface effects the intensive cleaning

With an optionally available spray lance, adjoining objects and areas can be cleaned as well

Type	Working Width (cm)	Weight (kg)	Power (kW / PS)	Pressure Pump (bar / l/min)	Order-No.
Easy-Clean EC 60	60	50	4 / 5,5	max. 150 / 13	5170.0004

Extensive Accessories:

Type	Order-No.	Type	Order-No.
Spray Lance SL 8	2611.0032	Sand Blasting Kit SSK	2611.0033
Dirt Drill DF	2611.0026	Water Hose Adapter WAS-Gardena	2611.0026
Chemical Kit CK	2800.0004		

Advantages:

With the Easy-Clean EC 60 for slabs and pavements you now have a compact all-round expert. No search for an outlet, no restriction of the working radius by cables. **Optimal cleanliness – without spraying over or getting wet!** Easy-Clean EC 60 controls a high-performance petrol motor with 5,5 PS as well as a powerful high-pressure pump, which produces a spraying pressure of max. 150 bar. Special nozzles, mounted at the endings of the rotation arms, are cleaning the surface and the joints intensively and absolutely even on a width of 60 cm, only by one single passage. 4 large rolls permit a simple and easy pushing of the device, also over uneven or ecological pavers with large joints. The beveled splash guard hood permits working until directly at walls or in corners. The two-part handle can be folded up quickly and simply for transport, so no single components can be lost and simultaneously it serves as a carrying handle. The water supply can be turned off directly at the device through a stop-tap. An integrated flushing system conveys the worn out dirt immediately to the side away.

Results:

- Environmentally friendly, fast and even cleaning of pavements and slabs
- No soiling in the field of work
- Joints are water permeable again afterwards, as the Easy-Clean EC has removed the uppermost dirt layer (On traveled areas a re-sanding is recommended)

Cleans up to 5 times more compared to lance-equipped pressure washers !
